

GERIATRIC SURGICAL RELEASE

Pet's Name: _____

It is the policy of PAAC to perform surgery on pets less than 6 years of age without blood work. Blood work will evaluate liver and kidney functions and is recommended for owned pets over 6 years of age (feral cats presenting for the TNR program are excluded).

The blood work includes a complete blood count (evaluates red blood cells, white blood cells, and platelets), chemistry panel (evaluates liver and kidney health), and a heartworm test.

I accept _____ decline _____ blood work which is \$60.

The veterinarian reserves the right to refuse a patient for surgical sterilization based on physical exam and/or blood work findings which may indicate that anesthesia and/or surgery would be a detriment to the patient's health.
